LOG-RANK TEST REPORT: age_band

1. SUMMARY

Metric	Value
Number of patients	371
Number of events	60
Event rate (%)	16.2%
Average follow-up (months)	241.89
Median follow-up (months)	269.00

2. RESULTS TABLE

The Log-Rank Test is a non-parametric statistical test that compares survival curves between two or more groups. The null hypothesis states that there is no difference in survival functions between groups. A p-value < 0.05 indicates significant differences.

Covariable	Grupo A	Grupo B	n A	n B	test_statistic	p_value	-log2(p)	Decisión	Conclusión
age_band: band_	band_0-35	band_35-55	171	175	0.4357	0.5092	0.9737	No rechazar H0	No hay diferenc
age_band: band_	band_0-35	band_55<=	171	25	0.2113	0.6458	0.6309	No rechazar H0	No hay diferenc
age_band: band_	band_35-55	band_55<=	175	25	0.5647	0.4524	1.1444	No rechazar H0	No hay diferenc
